Table 1: Comparison of trait definitions between invertebrate trait databases. Only traits that are differently described across databases are listed. The definition is quoted if it enables differences to be identified, otherwise the differences are described. The hyphen indicates a missing trait. Reproduction was captured in multiple grouping features per database. Hence, differences for reproduction have been described in the paper. Body form traits are not different between databases, except that the North America (Vieira) database contains the trait Bluff (blocky) which does not appear in the other databases.

New Zealand	Shredders
America Australia	Detrivore ^a Trait herbivore includes among others the trait shredder
North America (Vieira)	Shredder
North America I (Twardochleb)	"Shred decomposing vascular plant tissue" Trait herbicore includes among others insect that shred livering aquatic plants
Tachet	"Eat coarse detritus, plants or animal material"
Freshwaterecology	"Feed from fallen leaves, plant tis- sues, CPOM"
Trait	Feeding

Predator	No distinction be- tween active and passive	"< 1 reproductive cycle per year"	"> 1 reproductive cycles per year"	
Piercer & engulfer	No distinction between active and passive	"<1 generation per year"	 1-2 generations year bi/multivoltine up to 5 generations per year up to 10 generations per year 	
Predator	No distinction between active and passive	"<1 generation per year"	"> 1 generations per year"	
Engulfers ("ingest prey whole or in parts") & piercers ("prey tissues and suck fluids")	No distinction between active and passive	"<1 generation per year"	"> 1 generations per year"	
 Carvers, engulfers & swallowers Piercers (plants & animals) are an additional trait 	No distinction between active and passive	"Life cycle lasts at $least$ two years"	"Able to complete at least two successive generations per year"	
"Eating from prey"	Distinguishes between active and passive	"One generation in two years"	"More than three generations per year" b	
Feeding	Feeding filter- feeder	Semivoltine	Multivoltine	

(water	-in	
Swimmers column)	Burrowers fauna)	ı
Distinguishes swimmer and skater	"Moving deep into the substrate and thus avoiding flow"	
Swimmer	Burrower	Sprawler
"Adapted for "fish- like" swimming"	"Inhabiting fine sediment of streams and lakes"	Sprawling: "inhabiting the surface of floating leaves of vascular hydrophytes or fine sediments"
 Surface swimmers (over and under the water surface) Full water swimmers (e.g. Baetidae). 	Burrowing "within the first centimeters of the benthic fine sediment" Differentiates also the trait interstitial (endobenthic)	
Passive movement like floating or drifting (trait swim- ming/scating) Active movement (trait swim- ming/diving) .	"Burrowing in soft substrates or boring in hard substrates"	"Sprawling or walking actively with legs, pseudopods or on a mucus"
Locomotion	Locomotion	Locomotion sprawling & walking

Crawlers (epiben-thic)	not distin- temporarily permanently	Distinguishes plastron and spiracle (termed aerial)	e size tions e	
${\rm Crawlers}\\ {\rm thic})$	Does n guish t and pe	Distinguishes tron and spi (termed aerial)	Multiple size classifications	
Database contains traits crawler, sprawler, climber and clinger.	Distinguishes temporarily and permanently attached	Plastron and spiracle (termed aerial) occur as separate and combined traits. Contains also traits: air (plants), atmospheric, and functional spiracles	< 9 mm a;c 9 - 16 mm	> 16 mm
1	Does not distinguish temporarily and permanently attached	Distinguishes spiracular gills, plastron, atmospheric breathers and plant breathers	< 9 mm 9 - 16 mm	> 16 mm
Defined as crawling on the surface of floating leaves or fine sediments on the bottom	Does not distinguish temporarily and permanently attached	Plastron and spiracle combined into one trait	< 9 mm 9 - 16 mm	> 16 mm
"Crawling over the bottom substrate"	Distinguishes temporarily and permanently attached	Definition includes respiration using air stores of aquatic plants	Multiple size classifications d	
-	Does not distinguish temporarily and permanently attached	Plastron and spiracle (aerial) are two separate traits	1 1	1
Locomotion	Locomotion sessil	Respiration plastron & spiracle	Body size small Body size	Body size large

a Traits from Botwe et al.

b Contains also bivoltine (two generations per year), trivoltine (three generations per year) and flexible.

c Contains a size trait with numeric size values. Contains also traits classifying size like Tachet and like the North American trait databases.

d Size classifications: <=0.25 cm, >0.25-0.5 cm, 0.5-1 cm, 1-2 cm, 2-4 cm, 4-8 cm, >8 cm. No distinction into small, medium and large.

e Size classifications: > 0.25 - 0.5 cm, 0.5 - 1 cm, 1 - 2 cm, 2 - 4 cm, 4 - 8 cm. No distinction into small, medium and large.
